

AC3PXXX-07/P3 Series Current Sensor

The AC3PXXX-07/P3 current sensor series is a tri-phase transducer, specially designed for low voltage, high current measurement in automotive applications. It provides solutions with faster speed and higher performance-price ratio for DC, AC or pulse currents measurement, with galvanic isolation techniques used to separate the primary and secondary circuits.

Features

- Perfect fit to "HybridPACK™" drive Infineon
- All in one tri-phase transducer (optional with 2 phase and 3 phase measurement)
- Unipolar 5 V DC power supply (3.3V available)
- Analog signal output
- Primary measuring current up to 1200 A
- Ambient operating temperature range: -40°C ...125 °C
- Typical step response <4µs

Automotive applications

- Starter generators
- Inverters
- HEV applications
- EV applications
- DC / DC converter

Advantages

- High accuracy sensor in automotive applications
- Fast response
- No insertion losses
- Small, thin, high performance-price ratio
- High frequency bandwidth

Standards

- IEC 60068-2 Series
- IEC 61000-4 Series
- IEC 60664-1 Series

Absolute maximum ratings

Symbol	Parameter	Rating	Unit
$V_{DD\ max.}$	Maximum supply voltage (not destructive)	8	V
I_C	Current consumption	18	mA
I_{OUT}	Output current	± 40	mA
T_A	Ambient operating temperature	-40 to 125	°C
T_S	Storage temperature range	-40 to 125	°C
$V_{ESD-HBM}$	ESD sensitivity HBM (Human Body Model)	4	KV
V_O	Insulation voltage for isolation	2.5	KV
D-CRD	Creepage distance	13.6	mm
D-CLE	Clearance	12	mm
CTI	CTI	PLC3	--

Stresses above these ratings may cause permanent damage. Exposure to absolute maximum ratings for extended periods may degrade reliability.

Notes

The content of this document is subject to revision without notice. Luksens shall have no liability for any error or damage of any kind resulting from the use of this document.

Safety and Environment

The product is to be installed by manufacturer trained personnel or competent person trained in accordance with manufacturer installation instructions.

With respect to applicable standards IEC 61010-1/ EN 61010-1 *safety requirements for electrical equipment for measurement, control and laboratory use part 1 general requirements*, the product should be used in limited energy secondary circuits.

Risk of electrical shock

Certain parts of the module can carry hazardous voltage during the operation process of the product because hazardous live voltage of primary conductor, power supply occurs, injury and/or serious damage will be caused if this warning is ignored.

Conducting parts must be inaccessible after installation of the product. Additional protection including shield or protective housing could be used according to IEC 60664 Insulation coordination for equipment within low-voltage supply systems.

Disconnection of the main supply will protect against possible injury and serious damage.

ESD protection

Damage from an ESD event will occur if the personnel is not well grounded when handling.

Important notice

Luksens reserves the right to make changes to or discontinue any product or service identified in this publication without notice. Luksens advises its customers to obtain the latest version of the relevant information to verify, before placing any orders. The information included herein is believed to be accurate and reliable. However, since additional design, measure, production, quality control take effect in the end product, therefore Luksens shall have no liability for any potential hazards, damages, injuries or less of life resulting from the end product.
